

Design/Build Solutions

THE AIR COMFORT PHILOSOPHY

The Air Comfort mission is to provide innovative and cost effective design solutions to our customers. Our design/build approach to projects involves understanding your needs, formulating solutions and then executing the plan. The process begins with a thorough discussion of your objectives and needs. We strive to learn your business. Not only your heating and cooling needs, but the entire operation: safety regulations, production processes and response time requirements, to name a few. Your complete satisfaction is our highest priority.

Air Comfort Corporation offers single source responsibility for all of your project needs. We set the industry standards for innovative and common sense designs combined with quality installations and prompt, efficient service.

AIR COMFORT OFFERS COMPLETE CAPABILITIES

• **Design Engineering**

Our skilled and innovative engineers are available to address any mechanical system application. We have experience with energy retrofits, system replacements and modifications, new construction, and commercial, industrial and process applications. Air Comfort Corporation has been the recipient of over a dozen First Place Awards from our professional peers in the American Society of Heating Refrigeration and Air Conditioning Engineers (ASHRAE) for our innovative energy saving designs.

• **Project Engineering**

Our project management team takes the design and makes it a reality. Constant communication throughout the project between system designers, project engineers, field foremen and technicians ensures a successful result for every project. By teaming talented people with the latest in system technology, Air Comfort is able to provide quality installations with greater efficiency, lower energy costs and better customer value.

LEADERSHIP IN TECHNOLOGY

TO PROVIDE VALUE

DRIVEN SOLUTIONS

- **Piping and Mechanical Installation**

The quality of workmanship by Air Comfort Corporation pipefitters and certified welders is second to none. We have many years of experience with process piping systems, chilled and hot water piping, steam systems, gas piping, ice rinks, boilers, chiller installations, cooling towers and heat recovery systems.

- **Ventilation Systems and Sheetmetal Installation**

Air Comfort Corporation has the ability to design any type of air distribution system, fabricate it in our sheetmetal shop, install it in the field and then test and balance the system to design criteria. We also offer certified air test and balance surveys for existing systems, which can indicate where comfort problems may exist. Our air balance technicians then work with our engineers to recommend system modifications.

- **Commissioning and Start-up**

Our skilled technicians can provide the system start-up and testing to verify proper operation upon completion of the installation. Our engineers are also involved at this stage to provide operation and maintenance information for both the technician and on-site maintenance personnel. We first verify that the system is operating as it was designed. Then we provide a walk through of the system so that the customer

and on-site personnel understand all facets of the system. An Air Comfort Corporation Preventive Maintenance Program should be considered at this time to keep the system operating at peak efficiency.

The Air Comfort Approach

Every project we undertake is assigned an Air Comfort Project Team consisting of the sales engineer, project engineer, superintendents, foremen and technicians. Every member of the team is committed to the project as a whole being successful, and meeting the needs of the customer. To ensure good communication, we have an internal weekly meeting with our entire construction department to discuss every job in progress. For some projects, we recommend weekly on-site meetings with the customer and other trades to address progress and any concerns that may arise. The Air Comfort approach also involves processes which provide engineering checks and balances, and help to eliminate oversights.

Finally, we ask for feedback from the customer on every project to assist us in our continuing Quality Improvement Process. Our overall approach to design/build projects is built around developing and providing the best solutions to our customers' needs.

The Air Comfort Commitment

Air Comfort Corporation has been dedicated to quality installations and service since 1935. Our measurement and definition of quality is our ability to serve our customers. For those of us at Air Comfort, the completion of every project is really a beginning — the start of a partnering relationship of providing solutions. We take a certain ownership of every system we install. We care how that system is operating ten and even twenty years after the installation, and we want to be involved in the ongoing care of that system. With that commitment comes a great responsibility. We know that for every project we perform, someone has put their trust in Air Comfort Corporation to provide a solution.

That is why for every project designed and installed by Air Comfort, we build long term solutions into the design and engineering phase in order to avoid future operating and maintenance problems. You can count on Air Comfort to provide quality workmanship, engineering excellence and dedicated service for all your design/build needs.

Call us today to discuss your next design/build project:
708/345-1900 in Illinois,
219/769-8970 in Indiana.

AIR COMFORT'S DESIGN/BUILD CAPABILITIES INCLUDE:

- Design engineering
- Project engineering
- Process piping
- Mechanical installation
- Ventilation systems
- Sheetmetal fabrication and installation
- Commissioning and start-up

Air Comfort Corporation was founded in 1935 as an engineering company and equipment distributor for Dr. Willis H. Carrier's air conditioning products. Since then, we have been servicing the Chicagoland and northwest Indiana areas with offices in both Illinois and Indiana.

Our company is now a full-service HVAC provider specializing in a complete range of products and services, including the design and installation of new equipment, retrofits of existing systems, comprehensive maintenance programs and emergency service. Our mission is to provide our customers with outstanding quality, reliability and performance. "Air Comfort - Dedicated to Quality Since 1935."
